

1. Sleep alarm

pressure sensor sets 8 hr alarm on
lie down on pillow

2. Shower sensor (I take long showers)

When thermometer senses increased temp, set
timer that ~~goes~~ chimes every minute, then
doesn't stop chiming after 3 mins until button
press.

3. Fridge closed checker

when button is
depressed, sets 1
min timer to
remind you to
close fridge if
it's slightly ajar

4. Study break checker:

When you close laptop, you set a study break length time, chimes after length has elapsed.

5. Cookie tin open alarm:

Button must remain pressed. When depressed, gets 10s timer, ~~time~~ so cookie consumption is limited. Each subsequent opening, its one s less.

6. Workout motivator

30 min Alarm starts when the accelerometer senses running. If you stop running before timer is up, it will chime obnoxiously until you start again.

7. Cake timer

When temp is hot and button depresses then presses, activates ~~press~~ alarm.

8. Dog temperature walker

Hot temperatures are bad for dogs, but they need walks! When thermometer senses increase in temp, it sets a timer based on how long dog can be walking at that temp.

9. Subway leaving tracker

The device pulls data on when a B train is ~~at~~ stations before mine. At that point, it sets a three minute countdown for me to leave the app.

10. Backpack NTC chip checker

When the backpack moves, a 1 minute timer is set. If after 1 min the device does not detect my laptop and the backpack is still moving, raise alarm because I forgot my laptop!
